

8 Channel Digital Audio Fan Out Module

The 1700-19 8 Channel Digital Audio Fan out Board from Broadcast Devices, Inc. converts from the balanced DB-25 Tascam™ D-88© format to 8 BNC connectors for balanced to unbalanced conversion. This popular standard is in use in many professional audio, radio and television facilities. The 1700-19 now provides a quick and convenient way to interface to these two popular standards. BDI also offers DB-25 to XLR cables in addition to the 1700-19 forming an entire solution path for digital audio applications requiring conversion.

The 1700-19 can be ordered as a PC board or in two different single E.I.A. rack panel versions with a single or dual set of 1700-19 modules. See our price list for ordering information along with cable assemblies available. We can provide custom rack panel configurations for this product as well. Contact the factory for a quote and delivery schedule.
