Lan Connection

SWP-200 Series

Digital RF Power Meter/Switch Controller

New! The SWP-200 Calibrated RF Power Meter & RF Switch Controller is suitable for digital & analog forward and reflected power measurements . Provides complete control of one to up to four RF switches. The SWP-200 can be interfaced to your existing four port switches, can (*optionally*) be supplied with interface cables for most four port switches made.

The SWP-200 can operate in Hands Off (Pre-programed) or manually controlled modes. One-button control of four port switches, manages interlock closures, and transmitter control in a single rack unit chassis. Additional features include RF failure and RF safety sensing to protect a switch from damage if RF is present, and a switch command is called for. The SWP-200 can also be used in AM radio applications to control multiple open frame contactors. This is a reliable, versatile RF support product that provides around the clock peace of mind.

New *optional* Web LAN Port board allows internet connection, and display of the following data:

Forward Power

Pressure *

Reflected Power

Fault & Fault Reset

Temperature *

Switch Position

**Requires optional hardware.*
